

Systems Performance Measure 5: First Time Homeless

Equity Analysis by Race & Ethnicity

Value of the Measurement

System performance measure 5 is a key indicator of how well a CoC is preventing homelessness occurrences for households who have no previous system engagement within 24 months of enrollment (new) or and those who have had an enrollment within 24 months (not new).

- Includes data from Emergency Shelter (ES), Safe Haven (SH) & Transitional Housing (TH)
- May reveal opportunities for intervention or the success and reach of current interventions

- 2021
- 2022

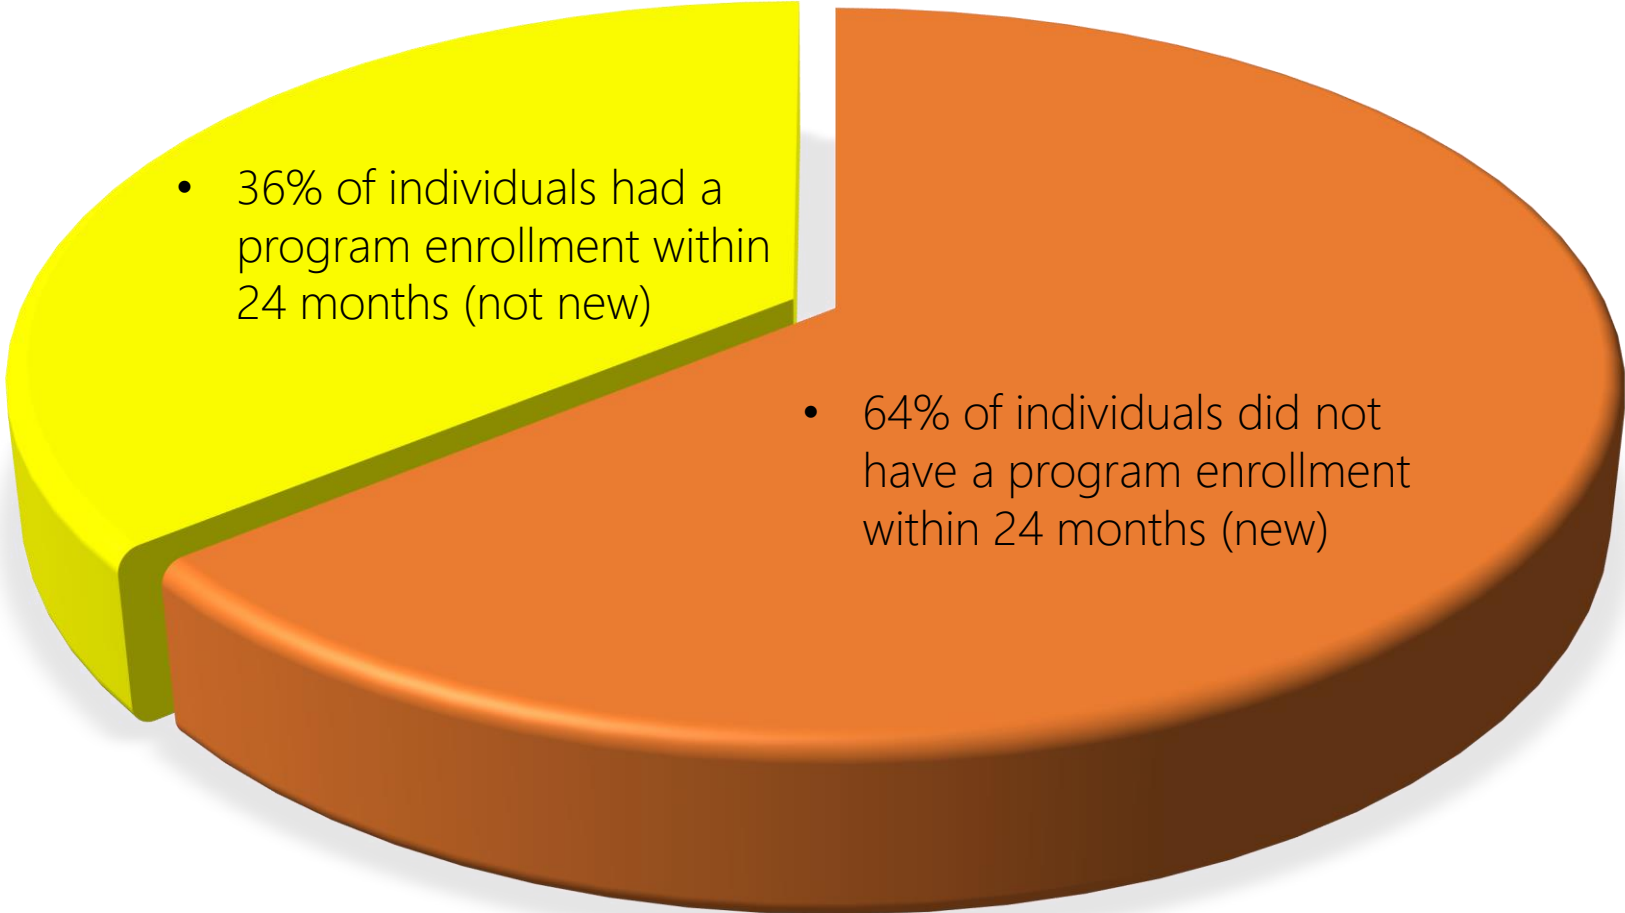

Total (center)
New (top)
Not New (bottom)

New vs. Not New

New Entries account for the largest percentage of First Time homelessness across all years

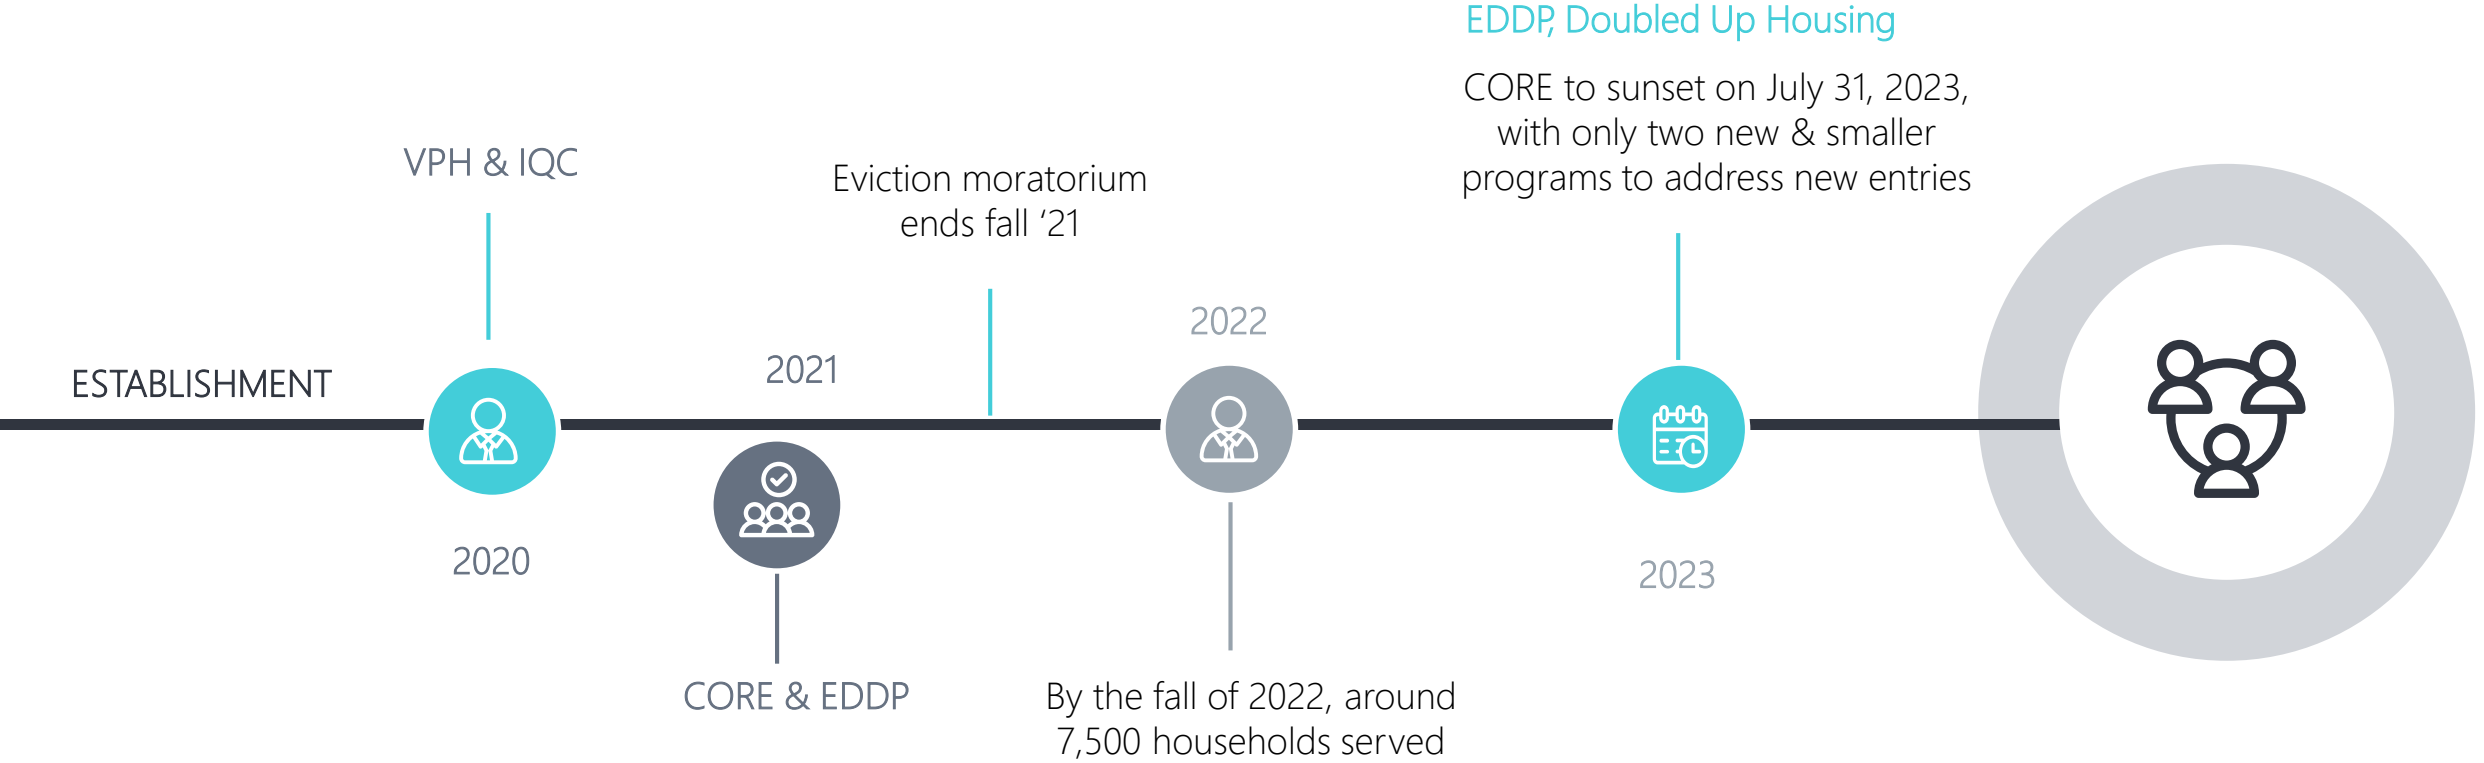

Year-to-Year First Time Homeless (2019-2022)

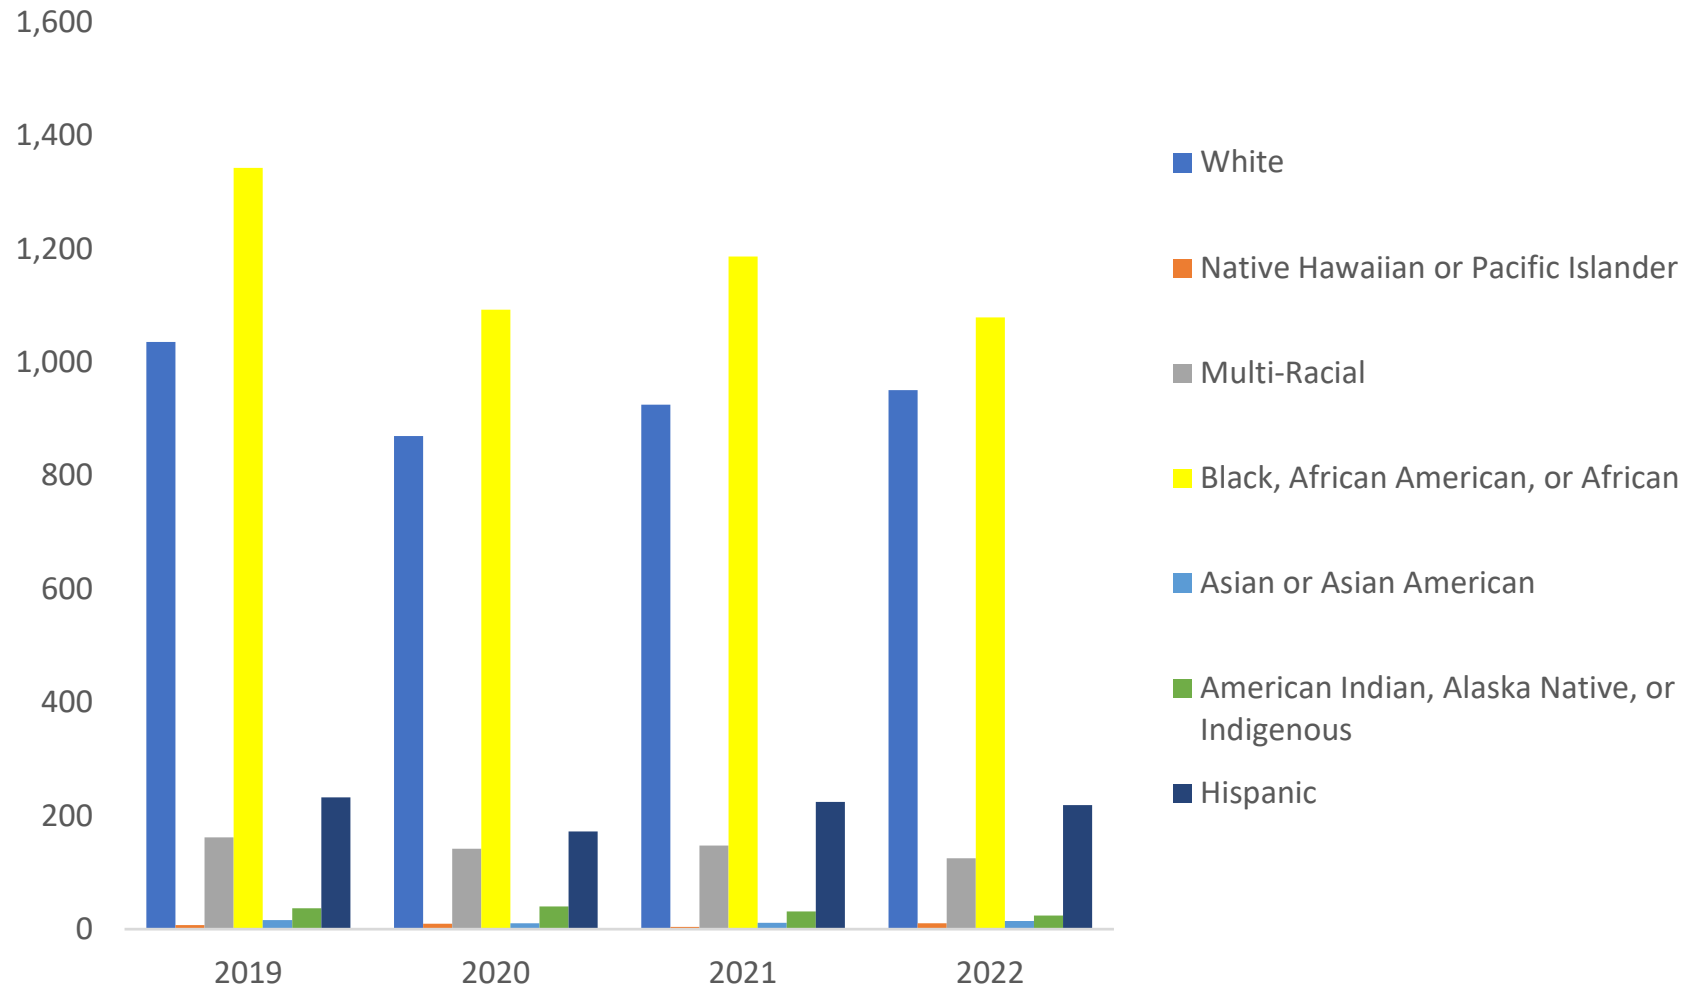

RACE & ETHNICITY EQUITY ANALYSIS

COVID Program Timeline

First Time Homeless By Ethnicity & Race (2019 -2022)

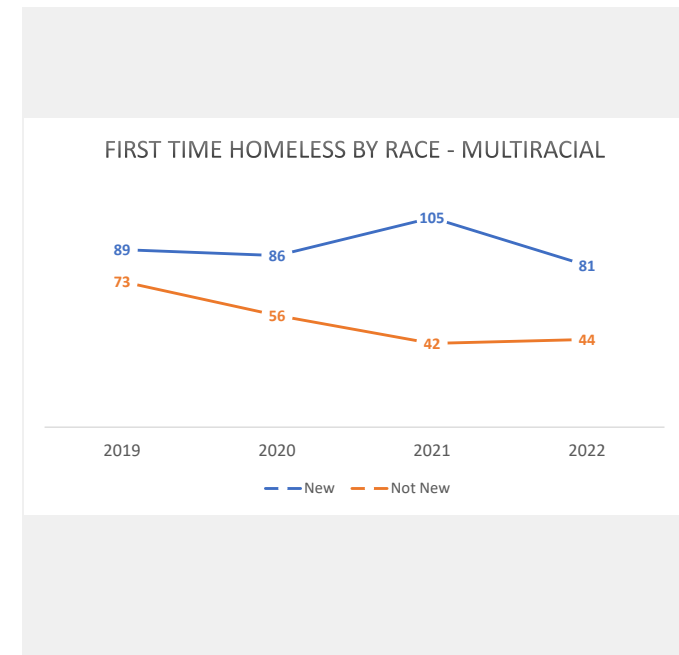

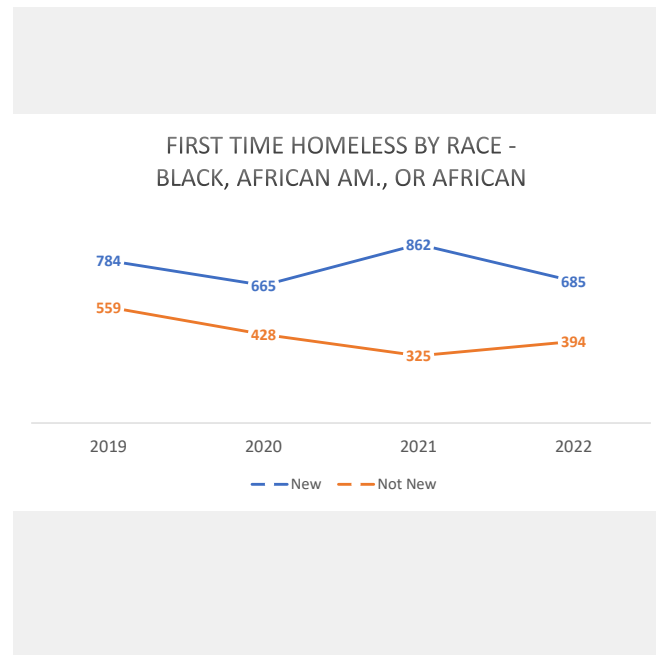

Source: HMIS (January 2019 – December 2022)

First Time Homeless by Race & Ethnicity (2019-2022)

Overall, the number of individuals (*seen below*) with a previous system engagement within 24 months has declined since 2019.

New FTH increased for all populations between 2020 – 2021, but declined again in 2022.

First Time Homeless by Race & Ethnicity (2019-2022)

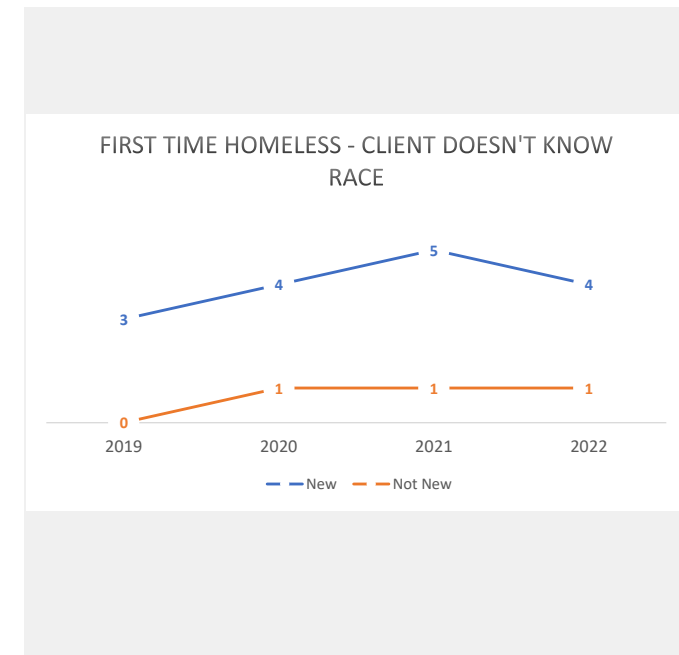

Overall, new entries into homelessness increased for Native Hawaiian or Pacific Islander and Asian or Asian American groups, but declined for all other race and ethnicity groups.

First Time Homeless by Race & Ethnicity (2019-2022)

When data is not identified, it is most likely to be due to it *not being collected* as opposed to client refusing or not knowing.

There are 194 instances in which race was not identified.

New Entries by Race & Ethnicity (2019-2022)

Like many other BIPOC populations, Hispanic/Latin (A)(O)(X) is significantly underrepresented in the data. Many HSI have communicated barriers to engagement

FIRST TIME HOMELESS BY ETHNICITY -
HISPANIC/LATIN(A)(O)(X)

FIRST TIME HOMELESS - ETHNICITY DATA NOT
COLLECTED

New Entries by Race & Ethnicity (2019-2022)

When data is not identified, it is most likely to be due to it *not being collected* as opposed to client refusing or not knowing.

FIRST TIME HOMELESS - CLIENT REFUSED ETHNICITY

FIRST TIME HOMELESS - CLIENT DOESN'T KOW ETHNICITY

Black, African Am, & African people represent the highest total of New Entries across all years

50%
Annual Avg. of all
New Entries

- Hispanics/Latinos account for 9% of all First Time Homelessness (2019-2022)
- 70% of Hispanics that experience homelessness are New Entries

Data Observations (2019-2022)

Not New Entries steadily declined between 2019-2021; having a slight year to year increase of 8% in 2022

In regards to race, though non-Black BIPOC only account for an avg. of 2% of the total data; their experience is overwhelmingly as a New Entry

Most BIPOC populations experience homelessness at higher rates than Whites, largely due to long-standing historical and structural racism that has led to higher rates of poverty, incarceration, housing barriers, and health care access.

Source: HMIS (January 2019 – March 2023)

Current Implications

- Though some populations had relatively large increases, the findings are not statistically significant
 - Ex. Native American and Pacific Islanders – 33%
- 164 clients with no race or ethnicity demographic data
 - 67% of those occurrences were Data Not Collected
- Hispanic system engagement for new to homelessness increased between 2020-2022, but total yearly engagement is similar throughout all years

This is a data snapshot.

Attendance and participation in the Data Work Group offers a more comprehensive and in-depth analysis.

Meetings are monthly on the 2nd Thursday at 9:00am.
